ABOUT

I'm a Full Stack and AI-native engineer with 2+ years of experience in a product-based CRM SaaS company, building scalable, intelligent systems for customer analytics and KPI tracking. I develop APIs, background workers, and AI-driven solutions using modern stacks, while leveraging LLMs, orchestration frameworks, and tools like Azure and Docker. Skilled across multiple languages and databases, I focus on combining software engineering with applied AI (including emerging frameworks like OpenCLAW) to deliver data-driven insights and future-ready, optimized solutions.

EDUCATION

Shri Shankaracharya Group Of Institutions

July 2017 – Aug 2021

B.TECH - Computer Science and Engineering

Bhilai

WORK EXPERIENCE

EasyRewardz Software Services

Feb 2024 – Present

Software Developer

Gurugram, India

- Developed and maintained a CRM SaaS platform, building scalable REST APIs, background workers, and microservices to support customer analytics and KPI tracking.
- Improved API performance by up to 30% through optimized database queries using PostgreSQL, MongoDB, and Redis.
- Designed real-time data processing and communication systems using Kafka and RabbitMQ, ensuring reliable and low-latency data flow.
- Built and deployed cloud-native solutions on Microsoft Azure using Docker, enhancing system scalability and reliability.
- Leveraged AI/ML tools and LLM-based workflows for task orchestration, improving developer productivity and automation efficiency.
- Contributed to system design and end-to-end development of scalable platforms, reducing onboarding time by 25% and improving customer engagement by 15%.
- Optimized internal tools and debugging workflows, reducing issue resolution time by 40%.

AccioJob

Aug 2022 – Jan 2024

Full Stack Developer Trainee

Remote

- Completed an intensive 18-month training program focused on full stack development and system design.
- Built and deployed production-ready applications using Java, Spring Boot, and REST APIs.
- Designed scalable backend architectures following clean code and microservices principles.
- Developed responsive front-end interfaces and improved user experience across applications.
- Enhanced application performance through efficient API handling and optimized database queries.
- Gained hands-on experience across the full software development lifecycle, from development to deployment.
- Strengthened problem-solving and engineering fundamentals, building a foundation for AI/ML and LLM-based system development.

PROJECTS

Plant Moitoring System 📄 | IOT, Raspberry Pi, HTML, CSS, JavaScript

Sept 2020

- Spearheaded the development of a proprietary software that tracked plant growth rates for a large-scale commercial farming operation; optimized crop yields by 25 percent and increased overall revenue by 33 percent per quarter.
- Monitors temperature, light intensity and other beneficial parameters crucial for plant's growth and give constant updates on the device from data stored over cloud.

- Solves the problem of excessive Labour-Force requirement on the fields for monitoring thereby increasing productivity by 20 percent .

Inventory Management System | ASP.Net , CSharp , MySQLServer

April 2022

- Developed a Inventory Management System that displays products, orders, stocks and other details while allowing users to add and modify. The system generates sales report and update any entries once the user is authenticated.
- The system is organized and focuses on user-friendly approach which reduces the overall time required in manually entering the data by the user .

Book My Show Clone | Spring Boot, Hibernate , JPA, Postman, Tomcat

March 2023

- Created a Web-based ticket booking platform with intuitive movie selection, secure transactions and comprehensive admin theatre management capabilities.
- Streamlined ticket booking: Users can select movies, theatre, show-times and seats and theatre owners can manage registrations, seating-arrangements and show-times.
- Enhanced movie-going : User-friendly interface, highly concurrent with multiple booking requests, ACID compliant and robust backend architecture.

TECHNICAL SKILLS

Languages: Java, C, C++, C#, JavaScript, Python, SQL

AI/ML & LLM Tools: OpenAI APIs, LLMs, Prompt Engineering, OpenCLAW, Claude Code, GitHub Copilot

Frameworks & Technologies: ASP.NET, Spring Boot, Node.js, REST APIs, Microservices

Cloud & DevOps: Microsoft Azure, Docker, Git, CI/CD, MLOps Basics

Databases & Streaming: PostgreSQL, MongoDB, MySQL, Redis, Kafka, RabbitMQ, RisingWave

Developer Tools: VS Code, Visual Studio, MySQL Workbench, Apache NetBeans, Spark

EXTRACURRICULAR

State Development Board

Sept 2019

Role

Durg

- Headed team of 20 in VVPAT Election Awareness Programme .

● National Level Athletics Competition

Sept 2013

Role

Korba

- Achieved medals across different Track and Field events.
